

MASTER

Midget Power Trowel

does a

skilled hand trowel job *six times as fast...*

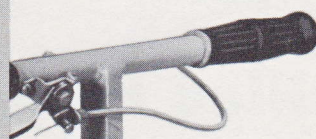

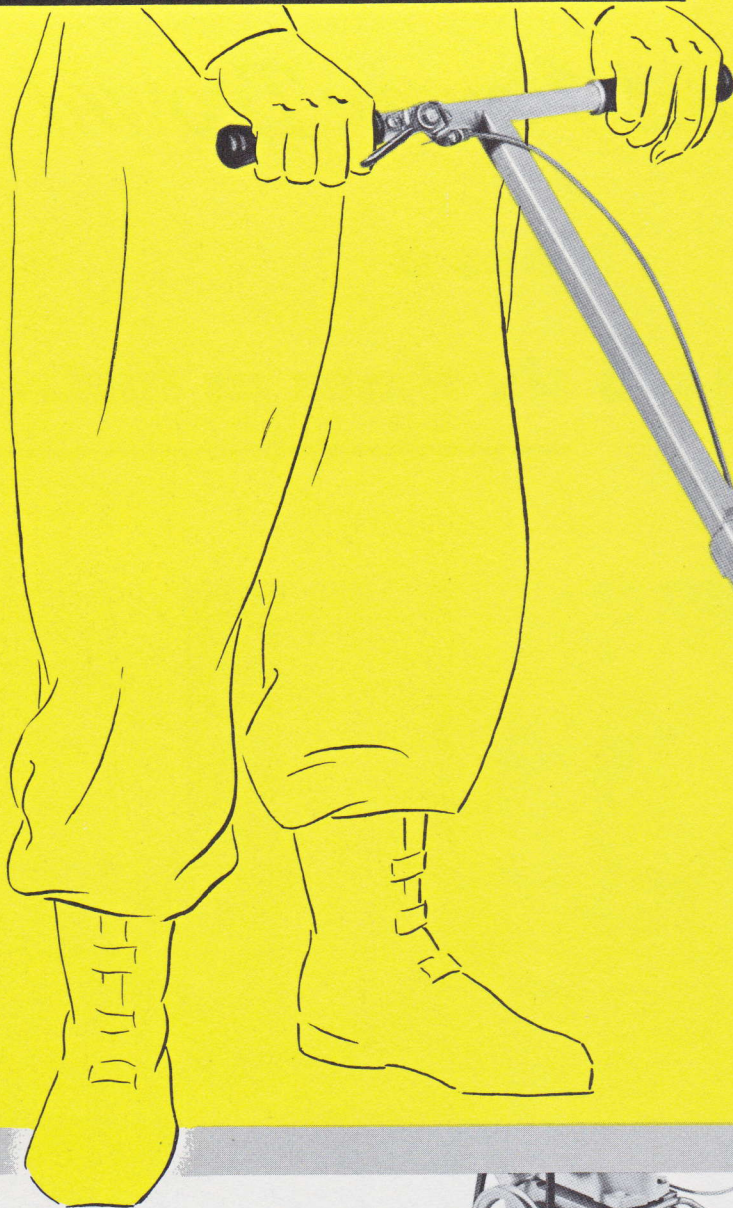

concrete finishers

With this low-price power trowel you finish jobs quicker, better and cheaper. Your men do more, without tired backs and sore knees.

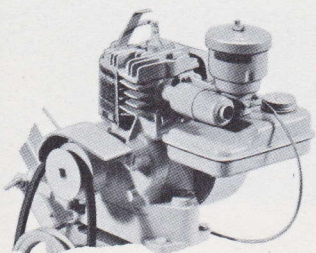

MASTER

Midget Power Trowel floats and finishes

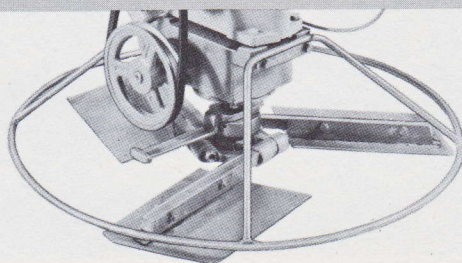

HANDLE TELESCOPES

The handle adjusts to fit the user and telescopes to less than 2½' for easy, convenient carrying.

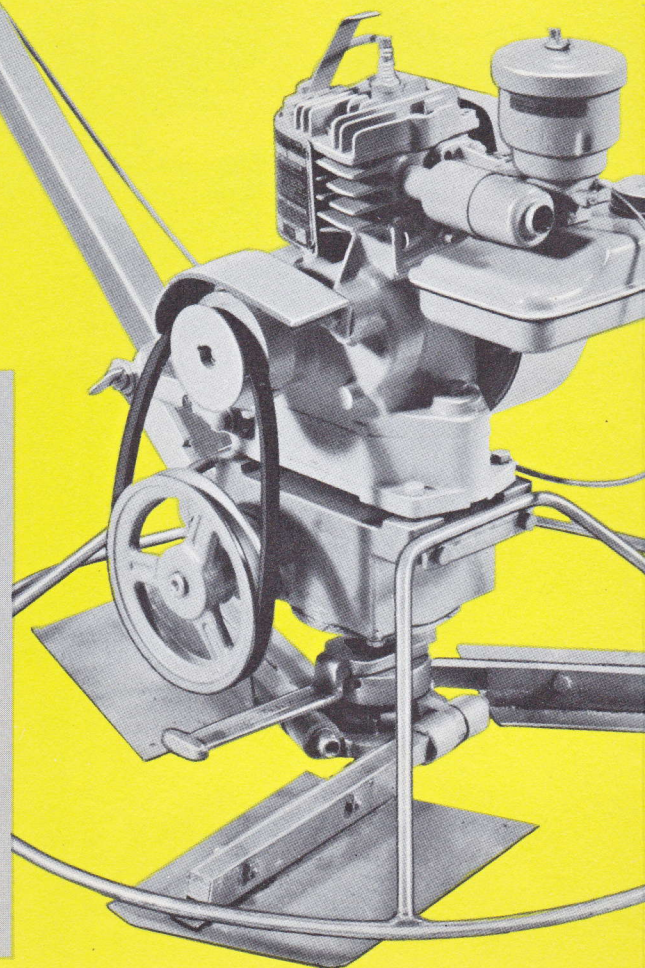

BRIGGS & STRATTON ENGINE

The engine's a dependable 1 h.p. Briggs & Stratton. Starts fast, runs smooth. Clutch slows or stops trowel at will. Service all over the world.

BLADES ADJUST

Four easy adjustments for floating, sweat, smooth or hard trowel finishes. Set in a second, they snap into place. Good work from all four positions.

vel es concrete faster!

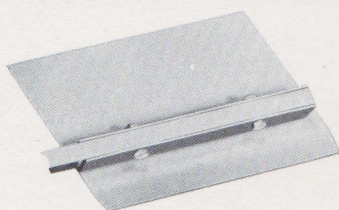

Like all good power tools, the Master Midget Power Trowel gets more work done faster, with less effort . . . and does a better job.

You're an expert with it in 15 minutes . . . can make float, sweat, smooth or hard trowel finishes . . . on slabs, sidewalks, basements, doorways, porches, driveways or small rooms . . . *with the same sweep finish that takes years to learn to do by hand.*

The concrete sets up better than by hand. The surface is denser, harder and more accurate. You can work with coarser, dryer mixes at the start and waste less time between float and finish. The Master really "pays for itself in no time."

Most important of all, one man with a MASTER can "beat the set-up" on a load of concrete on the hottest, windiest days.

Every concrete finisher can do better work and make more money with the 24" Master Midget. You, too.

HAND TROWEL ACTION

The swept-back angle of the blades duplicates the skilled sweeping action of an expert finisher. No other power trowel has this special feature.

LIGHTWEIGHT—VERSATILE—Low Cost

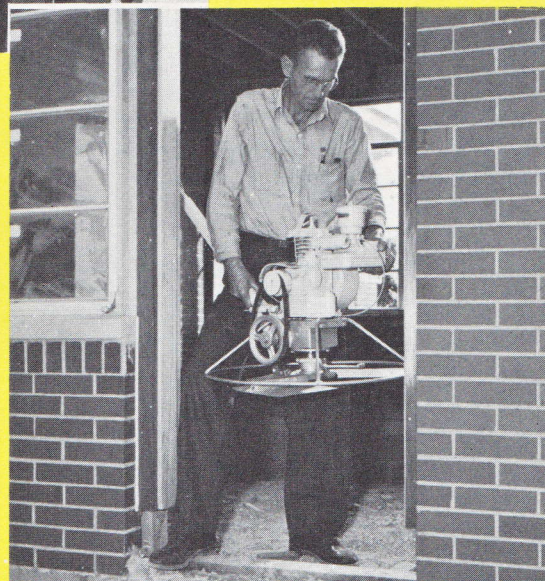

OFF TRUCK (OUT OF CAR)

Treat the Midget as "just another tool". Haul it in your trunk or truck. Lift it out yourself.

THROUGH DOOR

It goes through any doorway . . . finishes right through the doorway, for that matter.

DOWN STAIRS

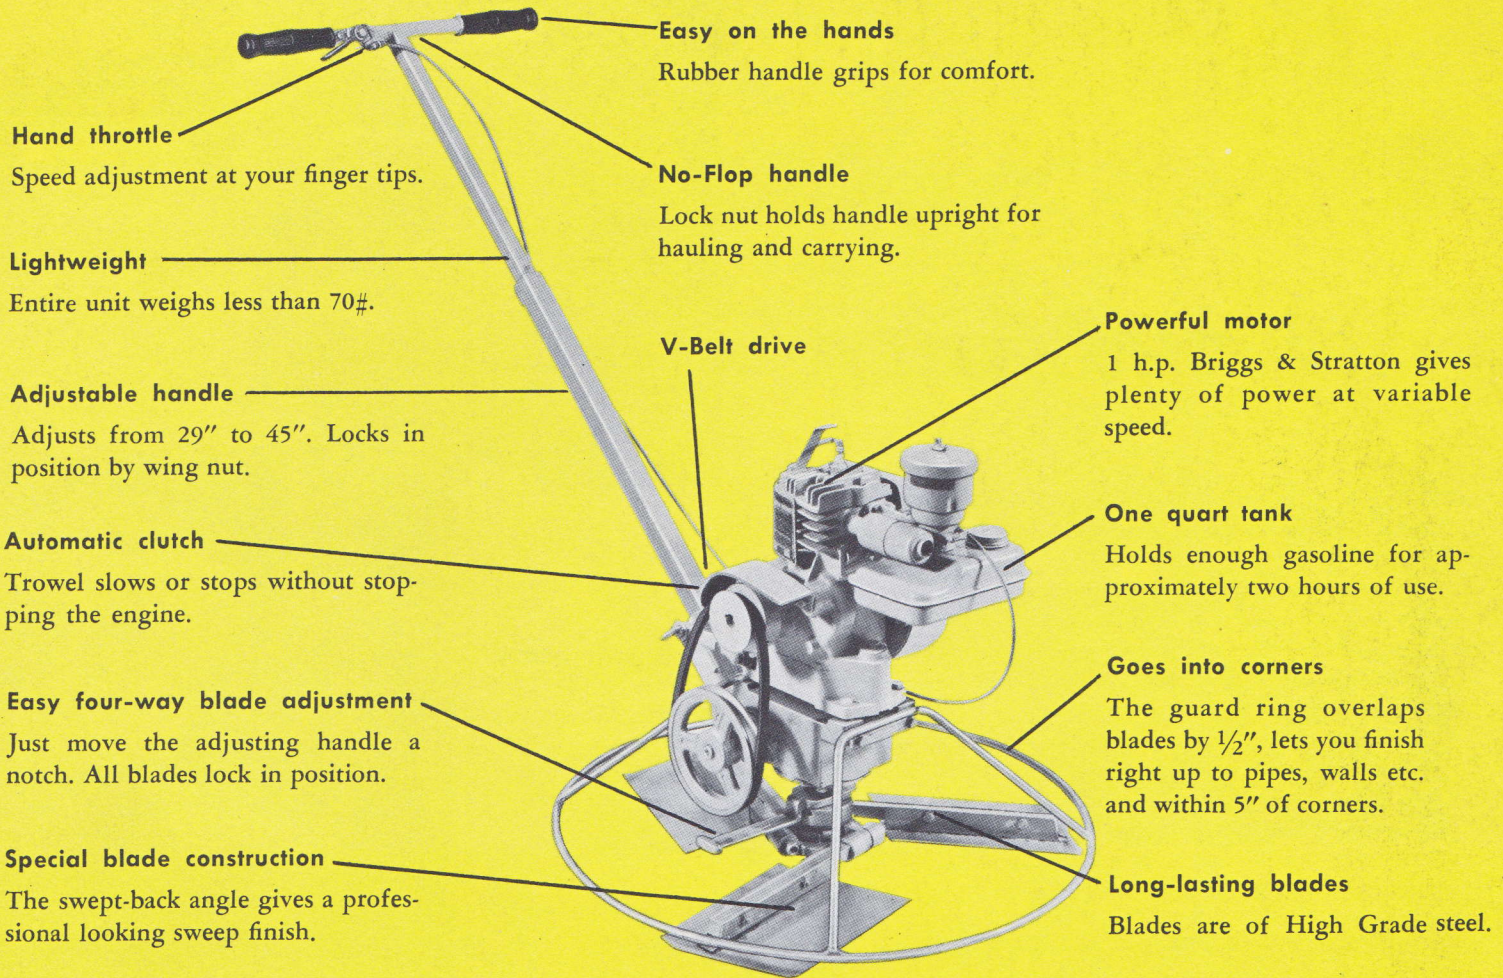

All in one piece. You carry it down, set in place, start the engine and go to work. Weighs less than 70#.

IN CORNERS

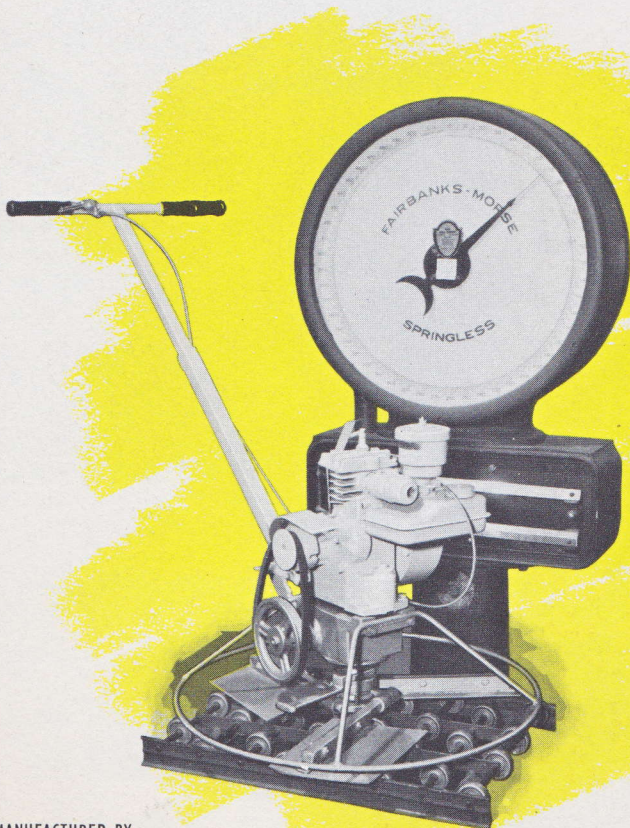

The ring guards the blades, it does not rotate. You go right up to pipes and other obstructions, and within 5" of corners.
